

Protecting your family, home & business

No matter what the size or scope of the requirements, the Euro 46 wired security system is a system to suit your project. From a large household to a small office the Euro system can be configured to your requirements

SMS Texting:

Keep control of your own alarm system with SMS reporting every time an activation occurs. Or receive a notification when certain user codes are entered, e.g. notifying you when children return home from school.

Wireless Peripherals:

Adding a wireless expander to your Euro 46 system allows you to combine wired and wireless sensors on one control panel. Ideal for monitoring garages or outbuildings where wiring could be problematic.

Event Log:

The time and date stamped Event Memory Log stores information not only about alarm activations but also which user sets and unsets the system.

Alarm Receiving Centre (ARC):

The Euro Range can be connected to an Alarm Receiving Centre, which are staffed 24 hours a day, 365 days a year.

Programming:

The Upload/Downloading facility allows your installer to programme your control panel remotely, avoiding disruption to you.

Intelligent Arming

The control panel recognises 'home' and 'away' modes and will set the system accordingly. For example if you were to set the alarm while in the house (home) and then walk out of the exit door, the system will register the action and automatically set the system to 'away'.

The Euro 46 offers a traditional, robust security system, easily expandable and ideal in areas where a wireless signal may not be suited, or as an replacement to an existing wired security system.

Protecting your family, home & business

Wired Peripherals Available for Your Home

TMD
Grade 3 dual technology
internal detector

Internal Detectors
A wide range of detectors available:
including grade 3 & pet detection

External Detectors
Protecting the perimeter

Keypads
For multiple entry points

External Sounders
An audible and visual deterrent

Break Glass Sensor
Protecting windows from intrusion

Prox Tag Reader
Set/unset from a tag on
your key-chain

Wireless Expander
Connecting wireless peripherals to
the system

Hybrid: The ultimate in flexibility & peace of mind

Coupling your Euro 46 security system with a wireless expander, allows your home security system to utilise wireless detectors and safety sensors along side the traditional wired ones. Ideal to protect external buildings on your property or into places where installing a wired sensor could prove to be problematic.
